Assignment – 05

Job Application Reports Suite — Report Types Use Case

1. Objective

To design and build a complete suite of Reports in Zoho Creator for the existing "Job Application Form" application, demonstrating the correct usage of all nine Report Types available in Zoho Creator — List View, Spreadsheet View, Kanban View, Calendar View, Map View, Timeline View, Pivot Table, Chart View, and Summary View — so that HR and hiring managers can view, analyze, and act on candidate data from multiple perspectives.

2. Problem Statement

The Job Application Form captures rich candidate data, but a single default list of records cannot serve every stakeholder's needs. HR needs a quick way to update interview and screening status in bulk, hiring managers need to see how many interviews are scheduled on a given day, recruitment marketing needs to see where candidates are applying from geographically, and leadership needs summarized hiring-pipeline counts and trend charts to plan headcount and recruiting spend.

Design a complete set of Reports on top of the Job_Application_Form in Zoho Creator, using every Report Type Zoho Creator provides, so that each stakeholder group has a purpose-built view suited to how they need to consume the recruitment data.

3. Scope of the Use Case

- Application Name: Recruitment & Job Application Management
- Base Form: Job_Application_Form
- Primary Users: HR Recruitment Team, Hiring Managers, Interview Panels, Leadership
- Deliverable: Nine purpose-built Reports, one for each Zoho Creator Report Type
- Objective of the Reports Suite: Give every stakeholder a report format best suited to their specific decision-making need

4. Report Types Used and Their Mapping

The table below maps every Report Type available in Zoho Creator to a specific report built on the Job_Application_Form.

Report Type	Report Name	Purpose	Key Configuration
List View	All_Applications_List	Provides a simple, scrollable list of every application with key columns for quick browsing and search	Columns: Candidate Name, Department Applied For, Years of Experience, Employment Type, Application Status; sorted by Application Submitted On (descending)
Spreadsheet View	Applications_Spreadsheet	Provides an editable, grid-style view for HR to bulk-update screening and interview status	Inline-editable columns: Screening Status, Interview Round, Interviewer Assigned; grouped by Department Applied For
Kanban View	Application_Status_Kanban	Displays applications as draggable cards grouped by hiring-pipeline stage, so HR can visually track progress	Grouped by Status field: Applied / Screening / Interview / Offer / Rejected; card shows Candidate Name and Department
Calendar View	Interview_Schedule_Calendar	Displays applications on a calendar based on scheduled interview date, to help interview panels plan their day	Based on Scheduled_Interview_Date; each day cell shows the count of interviews scheduled and department breakdown
Map View	Candidate_Location_Map	Plots candidates' current addresses on a map, to help HR understand geographic reach and plan relocation discussions	Based on Current_Address (geocoded); pins colored by Department Applied For

Report Type	Report Name	Purpose	Key Configuration
Timeline View	Application_Activity_Timeline	Displays application submissions along a time axis, to help HR track applicant flow across a hiring campaign	Based on Application_Submitted_On; grouped by week, showing cumulative applications received
Pivot Table	Department_By_EmploymentType_Pivot	Cross-tabulates Department Applied For against Employment Type Preferred to show the mix of full-time, part-time, and intern applicants per department	Rows: Department_Applied_For; Columns: Employment_Type_Preferred; Values: Count of Applications
Chart View	Department_Applications_Chart	Visualizes the number of applications per department as a bar chart, to help HR see which roles are attracting the most interest	Chart type: Bar Chart; X-axis: Department_Applied_For; Y-axis: Count of Applications
Summary View	Department_Wise_Summary	Groups and summarizes applications by department, showing count and average years of experience for pipeline health checks	Grouped by Department_Applied_For; Summary columns: Count of Applications, Average of Years_Of_Experience

5. Report Configuration Details (Report-wise)

All_Applications_List (List View)

- Default landing report for HR, showing every application in a flat, searchable list.
- Includes a search bar and column-level filters for Department Applied For, Employment Type, and Application Status.

Applications_Spreadsheet (Spreadsheet View)

- Used daily by HR to update screening status and assign interviewers in bulk.
- Only Screening Status, Interview Round, and Interviewer Assigned columns are editable; all other columns are read-only.

Application_Status_Kanban (Kanban View)

- Used by HR and hiring managers to visually track how candidates move from Applied to Offer or Rejected.
- Staff drag a candidate's card across columns as their status changes, updating the underlying Status field automatically.

Interview_Schedule_Calendar (Calendar View)

- Used by interview panels to see how many interviews are scheduled on a given day and prepare accordingly.
- Clicking a date drills down into the list of candidates scheduled for interview that day.

Candidate_Location_Map (Map View)

- Used by HR to understand the geographic spread of applicants for a role.
- Helps decide whether a role needs a relocation package or should be marketed more locally.

Application_Activity_Timeline (Timeline View)

- Used by HR to monitor how a hiring campaign's applicant flow builds up over time.
- Helps decide when to boost job postings if applications are trending low.

Department_By_EmploymentType_Pivot (Pivot Table)

- Used by HR to see whether departments are attracting full-time versus internship interest.
- Supports decisions on adjusting job posting language to attract the right employment type.

Department_Applications_Chart (Chart View)

- Used in hiring review meetings to visually compare which departments are receiving the most applications.
- Directly informs decisions on where to invest additional recruiting budget.

Department_Wise_Summary (Summary View)

- Used by leadership to gauge pipeline health and average experience level per department.
- Summary totals feed directly into workforce planning and headcount approval decisions.

6. Validation & Configuration Rules

- List View (All_Applications_List): default sort by Application Submitted On, descending, so the most recent applications appear first.
- Spreadsheet View (Applications_Spreadsheet): edit permissions restricted to the HR Recruitment role; all other fields locked.
- Kanban View (Application_Status_Kanban): card movement between columns triggers an automatic update to the Status field with a timestamp.
- Calendar View (Interview_Schedule_Calendar): only interviews scheduled for the current and next two weeks are shown, to keep the view actionable.
- Map View (Candidate_Location_Map): requires the Current Address field to be geocode-enabled for accurate pin placement.
- Timeline View (Application_Activity_Timeline): data refreshes daily to reflect the latest application trend.
- Pivot Table (Department_By_EmploymentType_Pivot): blank cells are displayed as zero rather than being left empty, to avoid ambiguity.
- Chart View (Department_Applications_Chart): chart is set to auto-refresh whenever a new application is submitted.
- Summary View (Department_Wise_Summary): departments with zero applications are still listed with a zero count, to highlight roles needing more sourcing effort.

7. Workflow Summary

- Step 1: Candidates submit applications through the Job_Application_Form as covered in the base use case.
- Step 2: HR monitors incoming applications using the All_Applications_List and the Application_Activity_Timeline.
- Step 3: As screening proceeds, HR tracks progress visually using the Application_Status_Kanban.
- Step 4: Interview panels use the Interview_Schedule_Calendar to prepare for each day's scheduled interviews.
- Step 5: HR uses the Candidate_Location_Map and Department_Wise_Summary to plan sourcing strategy and relocation discussions.
- Step 6: Leadership reviews the Department_By_EmploymentType_Pivot and Department_Applications_Chart in planning meetings to adjust hiring priorities.
- Step 7: On a daily basis, HR uses the Applications_Spreadsheet to update screening status and assign interviewers in bulk.

8. Expected Learning Outcomes

- Understand the purpose and correct use case for each Report Type in Zoho Creator.
- Learn how to choose the right report type based on the stakeholder's decision-making need rather than default to a single list view.
- Practice configuring grouping, sorting, and summary logic across different report types on the same underlying form.
- Understand how visual reports (Kanban, Calendar, Map, Chart, Timeline) support faster operational decisions than raw tabular data.
- Understand how Pivot Tables and Summary Views support planning and resource-allocation decisions.

9. Deliverable for This Lab Exercise

Students must build all nine reports on the existing Job_Application_Form in Zoho Creator exactly as specified above, configure the listed grouping and validation rules, and submit a screenshot-based lab record showing: (a) each of the nine reports in its configured state with sample data, (b) the report type selector in Zoho Creator's Report Builder for each report, and (c) at least one drill-down or interaction (e.g., clicking a calendar date or dragging a Kanban card) demonstrated with before/after screenshots.
