Assignment - 05

Job Application Command Center — Page Elements Use Case

1. Objective

To design and build a single internal "Command Center" Page in Zoho Creator for the existing "Job Application" application, demonstrating the correct usage of all eleven Page Builder elements — Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets, and Viewer — so that the HR recruitment team and hiring managers have one unified workspace to monitor, manage, and act on candidate data.

2. Problem Statement

HR currently checks recruitment progress through the default form report, but this gives no quick visual sense of how close the company is to its quarterly hiring target, no easy way to search for a specific candidate's application during a call, no drag-and-drop way to move candidates through the hiring pipeline, and no single place to review a candidate's resume or video resume. Recruiters waste time switching between the report, email attachments, and shared drives just to evaluate a single candidate.

Design a single internal Page in Zoho Creator that acts as HR's command center for recruitment, combining live data, quick actions, and reference material, using every Page Builder element Zoho Creator provides, so that recruiters can monitor and manage the entire hiring pipeline from one screen.

3. Scope of the Use Case

- Application Name: Recruitment & Job Application Management
- Page Name: Recruitment_Command_Center_Page
- Primary Users: HR Recruitment Team, Hiring Managers, Interview Panels
- Underlying Form/Report: Job_Application_Form, Candidate_Application_Report, Department_Applications_Chart
- Objective of the Page: Provide a single internal workspace that combines monitoring, searching, processing, and reference material for recruitment

4. Page Elements Used and Their Mapping

The table below maps every Page Builder element available in Zoho Creator to its role on the Recruitment_Command_Center_Page.

Page Element	Element Name	Purpose	Placement on Page
Panel	Command_Center_Main_Panel	Acts as the primary structural container that groups all other elements into one cohesive dashboard	Wraps the entire page as the outer layout container

Page Element	Element Name	Purpose	Placement on Page
Board	Application_Status_Board	Provides a Kanban-style board so recruiters can drag candidates between hiring-pipeline stages	Central column: columns for Applied, Screening, Interview, Offer, Rejected
Chart	Department_Applications_Chart_Widget	Visualizes live application counts per department as a bar chart	Top-right area, next to the Gauge
Gauge	Quarterly_Hiring_Target_Gauge	Displays progress toward the quarter's overall hiring target as a circular gauge (e.g., 12 of 20 positions filled)	Top-left area, first element the HR lead sees on opening the page
Search	Candidate_Search_Bar	Lets recruiters instantly look up a specific candidate's application by name, email, or application ID	Fixed at the top of the page, above the Board
Form	Quick_Referral_Intake_Form	Embeds the Job_Application_Form for HR to log a walk-in or employee-referred candidate directly from the command center	Right-hand panel, accessible via a tab or expandable section
Report	Full_Applications_Report	Embeds the complete Candidate_Application_Report for detailed row-level review and export	Lower section of the page, below the Board
Snippets	Interview_Evaluation_Criteria_Snippet	Reuses a pre-built content snippet (standard interview evaluation criteria and scoring guide) that is shared across the application form, this page, and interviewer briefing emails	Sidebar, as quick-reference text for interview panels

Page Element	Element Name	Purpose	Placement on Page
Button	Send_Interview_Reminder_Button	Provides a one-click action button to trigger interview reminder emails to candidates scheduled in the next 24 hours	Placed directly above the Application Status Board, near the Interview column
Widgets	Interviewer_And_OpenPositions_Widgets	Displays a small gallery of supporting widgets — live interviewer availability and current open positions count — for scheduling context	Bottom strip of the page, below the Full Applications Report
Viewer	Resume_And_VideoResume_Viewer	Embeds an inline document/video viewer so recruiters can open and review a candidate's resume or video resume without leaving the page	Sidebar, below the Interview Evaluation Criteria Snippet

5. Page Layout (Section-wise)

Section 1 — Overview Strip

- Quarterly Hiring Target Gauge (Gauge element)
- Department Applications Chart Widget (Chart element)
- Candidate Search Bar (Search element)

Section 2 — Processing Workspace

- Send Interview Reminder Button (Button element)
- Application Status Board (Board element)

Section 3 — Detailed Data

- Full Applications Report (Report element)

Section 4 — Reference & Quick Actions (Sidebar)

- Interview Evaluation Criteria Snippet (Snippets element)
- Resume and Video Resume Viewer (Viewer element)
- Quick Referral Intake Form (Form element, expandable tab)

Section 5 — Operations Strip

- Interviewer Availability and Open Positions Widgets (Widgets element)

All sections above are laid out within the Command_Center_Main_Panel, which serves as the single structural Panel wrapping the full page.

6. Configuration & Access Rules

- Panel (Command_Center_Main_Panel): configured with role-based visibility so only HR and hiring-manager accounts can access the page.
- Board (Application_Status_Board): each column mapped to a value of the Status field; dragging a card between columns updates the underlying record instantly.
- Chart (Department_Applications_Chart_Widget): set to auto-refresh at a fixed interval so HR always sees current departmental demand without manually reloading.
- Gauge (Quarterly_Hiring_Target_Gauge): target value configurable per quarter; gauge color changes (e.g., red to green) as filled positions approach the target.
- Search (Candidate_Search_Bar): configured to search across Candidate Name, Email, and Application ID fields simultaneously.
- Form (Quick_Referral_Intake_Form): identical validation rules to the standard Job_Application_Form, ensuring data consistency regardless of entry point.
- Report (Full_Applications_Report): includes export-to-Excel capability restricted to HR-lead-level accounts only.
- Snippets (Interview_Evaluation_Criteria_Snippet): centrally managed so that any edit to the evaluation criteria automatically reflects wherever the snippet is reused.
- Button (Send_Interview_Reminder_Button): triggers a workflow that emails only candidates with an interview scheduled within the next 24 hours, to avoid unnecessary reminders.
- Widgets (Interviewer_And_OpenPositions_Widgets): interviewer availability refreshes in real time; open positions widget pulls from the current approved headcount list.
- Viewer (Resume_And_VideoResume_Viewer): configured to display the latest uploaded resume or video resume file without requiring a manual link update each time a new file is uploaded.

7. Workflow Summary

- Step 1: An HR recruiter opens the Recruitment_Command_Center_Page and immediately sees the Quarterly Hiring Target Gauge and Department Applications Chart for a quick status check.
- Step 2: If they need to find a specific candidate, they use the Candidate Search Bar rather than scrolling through the full report.
- Step 3: As screening and interviews proceed, recruiters drag candidate cards across the Application Status Board to reflect the current stage.
- Step 4: For candidates with interviews scheduled soon, staff click the Send Interview Reminder Button to trigger bulk reminder emails.
- Step 5: For a walk-in or referred candidate, HR uses the Quick Referral Intake Form directly from the command center instead of navigating to a separate page.
- Step 6: For deeper analysis or export, the HR lead scrolls to the Full Applications Report.

- Step 7: Before an interview, panel members refer to the Interview Evaluation Criteria Snippet, check the Interviewer Availability Widget, and open the Resume and Video Resume Viewer to review the candidate's materials.

8. Expected Learning Outcomes

- Understand the purpose and correct use case for each Page Builder element in Zoho Creator.
- Learn how to combine Forms and Reports with visual monitoring elements (Chart, Gauge, Board) into a single operational dashboard.
- Practice using Search to make large candidate datasets quickly navigable for recruiters.
- Understand how Snippets support content reuse and consistency across multiple pages and forms.
- Learn how Widgets and Viewer elements extend a page with supporting media and reference documents.

9. Deliverable for This Lab Exercise

Students must build the Recruitment_Command_Center_Page in Zoho Creator's Page Builder exactly as specified above, using all eleven Page elements, and submit a screenshot-based lab record showing: (a) the full page in the Page Builder editor with all elements labeled, (b) the Gauge and Chart elements reflecting live sample data, (c) a drag-and-drop interaction on the Board element demonstrated with before/after screenshots, and (d) the Viewer element successfully displaying a sample resume or video resume.

Output Screenshots - Command Center Page

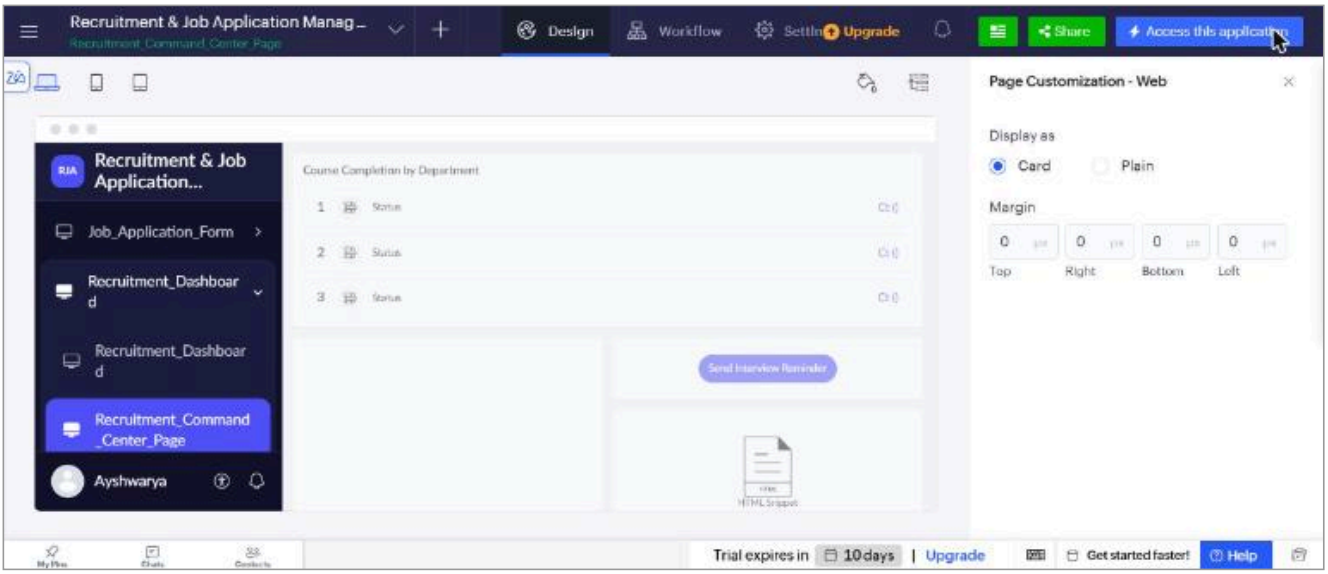

Fig 1: Recruitment_Command_Center_Page created in Page Builder and added to the app menu

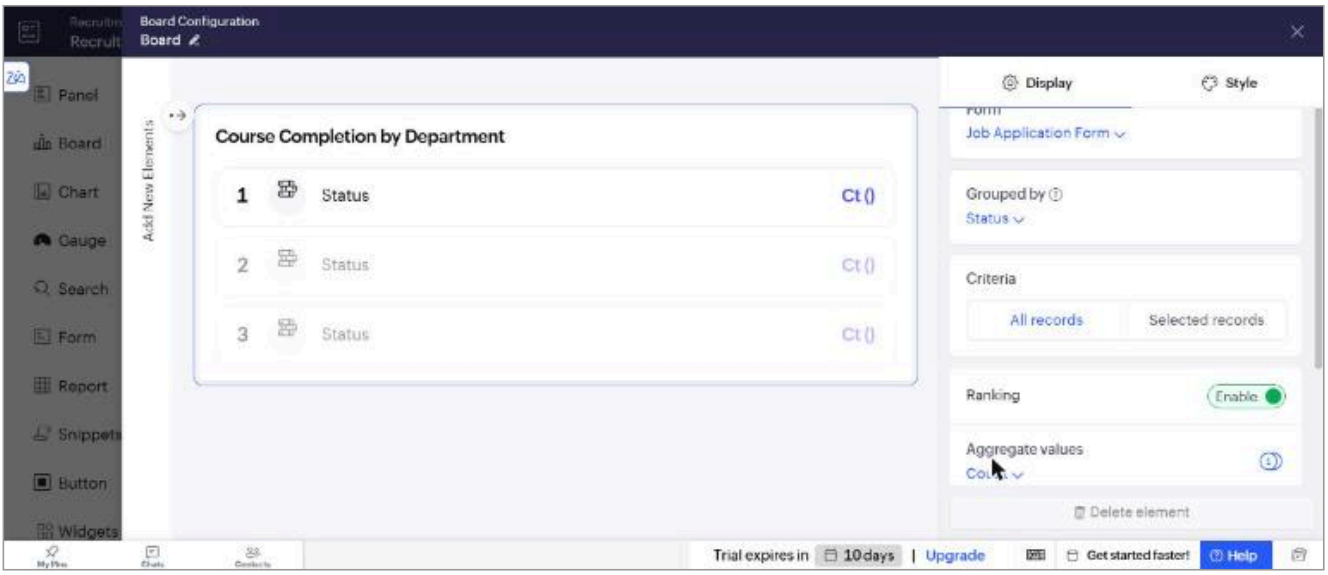

Fig 2: Board element configured - grouped by Status

Output Screenshots - Command Center Page (contd.)

Fig 3: Chart element - applications per Department (Count of Application ID)

Fig 4: Gauge element - hiring count with maximum/target of 20

Output Screenshots - Command Center Page (contd.)

Fig 5: Search element - target report All_Applications_List, criteria Application ID

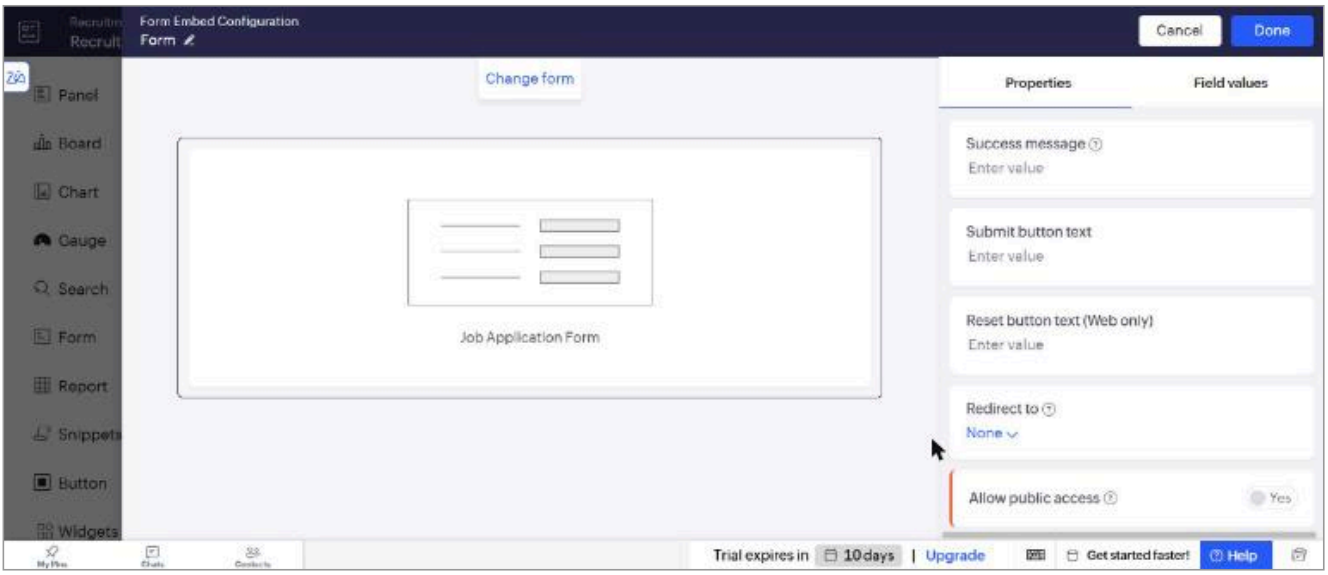

Fig 6: Form element - Job_Application_Form embedded

Output Screenshots - Command Center Page (contd.)

Fig 7: Report element - All_Applications_List embedded

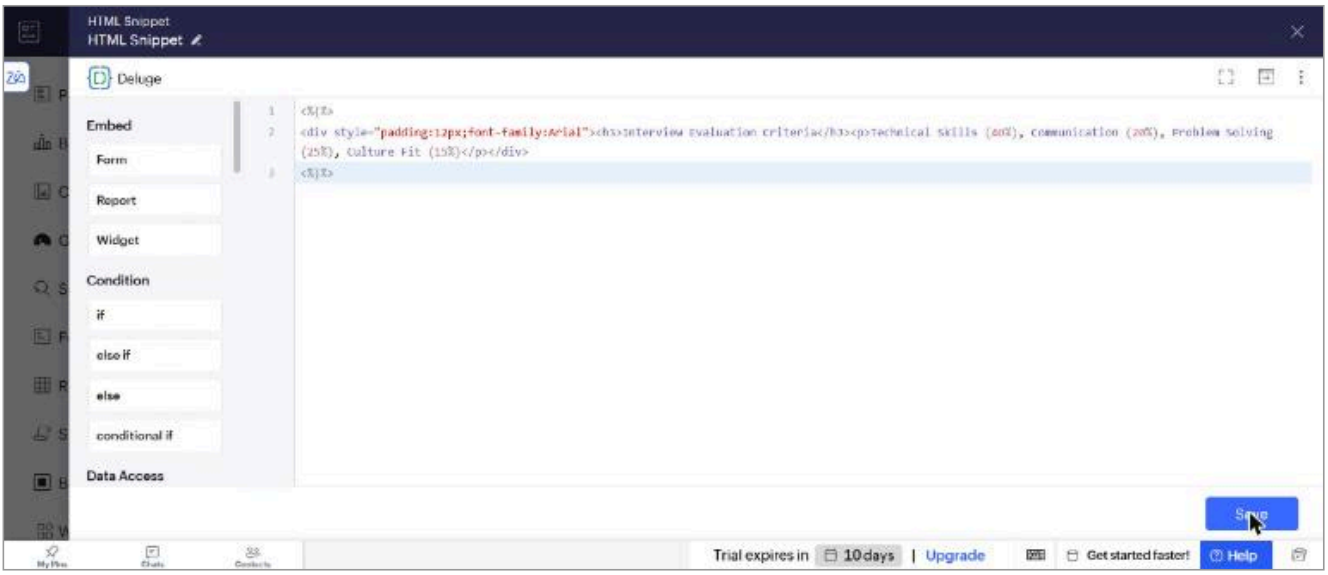

Fig 8: Snippets element - HTML snippet with Interview Evaluation Criteria (saved without error)

Output Screenshots - Command Center Page (contd.)

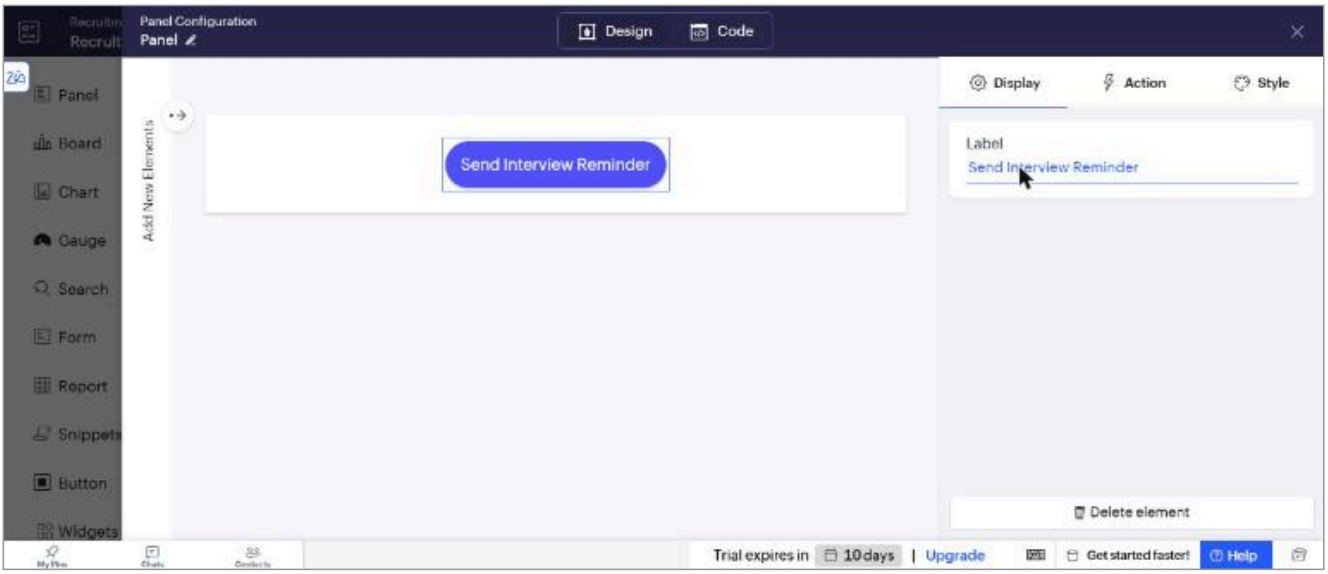

Fig 9: Button element - 'Send Interview Reminder'

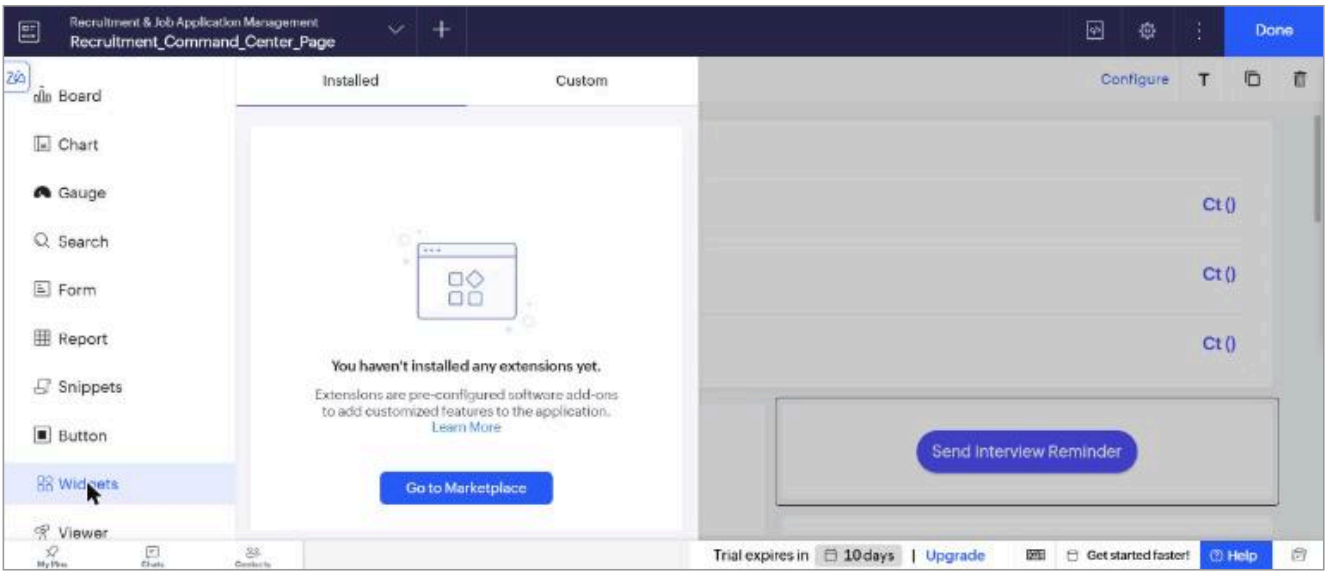

Fig 10: Widgets element - Installed Widgets gallery (no extensions installed in this account)

Output Screenshots - Command Center Page (contd.)
