Assignment - 05

Job Application Automation Suite — Workflow Options Use Case

1. Objective

To design and build a complete automation layer in Zoho Creator for the existing "Job Application" application, demonstrating the correct usage of all eight Workflow options available in Zoho Creator — Form Workflows, Schedules, Approvals, Payments, Blueprints, Batch Workflows, Report Workflows, and Functions — so that the recruitment lifecycle runs with minimal manual intervention from application to onboarding.

2. Problem Statement

The Job_Application_Form and its supporting pages and reports capture and display data well, but every downstream action currently depends on a human: sending application acknowledgements, reminding candidates of upcoming interviews, getting sign-off before an offer is sent, paying out employee referral bonuses once a referred candidate completes probation, notifying a large batch of rejected candidates, and recalculating the expected CTC when a candidate's current pay or hike expectation is edited. This manual dependency does not scale during a hiring surge, and it introduces delay and inconsistency.

Design a complete automation layer on top of the Job_Application_Form in Zoho Creator, using every Workflow option Zoho Creator provides, so that routine actions happen automatically, offers are routed for approval before being sent, referral bonuses are paid out without manual follow-up, and candidate status moves through a controlled, auditable process.

3. Scope of the Use Case

- Application Name: Recruitment & Job Application Management
- Base Form/Report: Job_Application_Form, Candidate_Application_Report
- Primary Users: Candidates (indirect, via automated communication), HR Recruitment Team, Hiring Managers, Finance/Payroll Team
- Deliverable: Eight automations, one for each Zoho Creator Workflow option, layered onto the existing recruitment process
- Objective of the Automation Suite: Reduce manual effort, enforce a controlled offer-approval and status process, and ensure timely communication throughout the hiring lifecycle

4. Workflow Options Used and Their Mapping

The table below maps every Workflow option available in Zoho Creator to a specific automation built around the Job_Application_Form.

Workflow Option	Workflow Name	Purpose	Trigger / Frequency
Form Workflows	On_Application_Submit_Workflow	Sends an instant acknowledgement email to the candidate and notifies the HR recruitment team of the new application	Triggered instantly on Add (form submission) of Job_Application_Form
Schedules	Daily_Interview_Reminder_Schedule	Runs once a day to identify candidates with an interview scheduled for the next day and sends a reminder email with round details	Scheduled to run daily at 5:00 PM, all year round
Approvals	Job_Offer_Approval	Routes any candidate marked ready for an offer to the hiring manager and HR head for sign-off before the offer letter is generated and sent	Triggered on Edit whenever a candidate's Status is changed to 'Ready for Offer'
Payments	Referral_Bonus_Payout_Workflow	Initiates a referral bonus payout to the referring employee once the referred candidate completes their probation period successfully	Triggered automatically when a hired candidate's Probation_Status changes to 'Completed', for candidates with a Referral_Employee_Lookup populated
Blueprints	Application_Lifecycle_Blueprint	Defines and enforces the full hiring lifecycle as a controlled sequence of stages with role-based transition permissions	Applied to every record in Candidate_Application_Report; stages: Applied → Screening → Interview → Offer → Hired / Rejected
Batch Workflows	Bulk_Rejection_Notification_Batch	Sends a polite rejection email to all candidates marked Rejected in the past 24 hours, processed in controlled batches	Triggered automatically every night at 9:00 PM, processing records in batches of 150

Workflow Option	Workflow Name	Purpose	Trigger / Frequency
Report Workflows	OnEdit_Recalculate_CTC_Workflow	Recalculates the Expected_Annual_CTC field whenever HR manually edits the candidate's Current Annual CTC or Expected Salary Hike Percent directly from the report	Triggered on Edit of any record within the Candidate_Application_Report
Functions	Generate_Offer_Letter_Function	A reusable custom function that generates a personalized offer letter PDF with role, CTC, and joining date, and emails it to the candidate; callable from a button, a schedule, or another workflow	Invoked automatically once the Job_Offer_Approval is approved, and also callable manually via a 'Resend Offer Letter' button

5. Automation Details (Workflow-wise)

On_Application_Submit_Workflow (Form Workflow)

- Fires the moment a new record is added to Job_Application_Form.
- Sends an acknowledgement email to the candidate containing their Application ID and expected timelines, and notifies the recruitment team for triage.

Daily_Interview_Reminder_Schedule (Schedule)

- Runs automatically every evening without any manual trigger, querying all records where an interview is scheduled for the following day.
- Includes the interview mode (in-person/virtual), round details, and any preparation notes configured for the role.

Job_Offer_Approval (Approval)

- Only candidates explicitly marked 'Ready for Offer' require this approval step; earlier pipeline stages do not trigger it.
- The offer letter is not generated or sent until both the hiring manager and HR head approve the request from their approval inbox.

Referral_Bonus_Payout_Workflow (Payments)

- Integrates with a payroll/payment connector configured in Zoho Creator to initiate the referral bonus transfer to the referring employee's account.
- On successful payout, the workflow automatically updates Referral_Bonus_Status to 'Paid' and stores the transaction reference; on failure, it flags the record for payroll follow-up.

Application_Lifecycle_Blueprint (Blueprint)

- Each stage transition (e.g., Interview to Offer) is restricted to specific roles, so a recruiter cannot mark a candidate Hired without the intermediate stages being completed.
- The Blueprint view gives HR leadership a visual, auditable trail of exactly when and by whom each candidate moved between stages.

Bulk_Rejection_Notification_Batch (Batch Workflow)

- Used every night to identify and notify all candidates marked Rejected that day, sending a consistent, respectful rejection message.
- Processes records in batches rather than all at once, preventing the workflow engine from timing out during high-volume hiring drives.

OnEdit_Recalculate_CTC_Workflow (Report Workflow)

- Ensures that if HR manually adjusts a candidate's current CTC or expected hike directly within the report grid, the Expected_Annual_CTC stays accurate without requiring a full form resubmission.
- Prevents inconsistent compensation figures that could arise from manual overrides.

Generate_Offer_Letter_Function (Function)

- Written once as a reusable Deluge function, it can be called from multiple places: automatically once the Job_Offer_Approval is approved, manually via a 'Resend Offer Letter' button, or from a batch that reissues letters after a role's terms are revised.
- Centralizing this logic in a function avoids duplicating offer-letter generation code across multiple workflows.

6. Configuration & Governance Rules

- Form Workflows (On_Application_Submit_Workflow): configured to fail gracefully and log an error if the candidate's email is invalid, rather than blocking the application.
- Schedules (Daily_Interview_Reminder_Schedule): sends only one reminder per scheduled interview to avoid appearing repetitive.
- Approvals (Job_Offer_Approval): configured with two required approver roles (Hiring Manager and HR Head) and a fallback approver in case either is unavailable.
- Payments (Referral_Bonus_Payout_Workflow): configured to retry the payout status-check callback up to 3 times before flagging the transaction as failed and alerting payroll.
- Blueprints (Application_Lifecycle_Blueprint): each stage transition requires a mandatory comment field to be filled, ensuring an auditable reason is logged for every status change.

- Batch Workflows (Bulk_Rejection_Notification_Batch): batch size configurable (default 150 records) to balance processing speed against system load.
- Report Workflows (OnEdit_Recalculate_CTC_Workflow): restricted to fire only when the Current Annual CTC or Expected Salary Hike Percent fields specifically change, to avoid unnecessary recalculation on unrelated edits.
- Functions (Generate_Offer_Letter_Function): includes input validation so it fails safely if called with a record that has no Candidate Name or Expected Annual CTC populated.

7. Workflow Summary (End-to-End)

- Step 1: A candidate submits the Job_Application_Form, immediately triggering the On_Application_Submit_Workflow (Form Workflow), which sends an acknowledgement.
- Step 2: As the candidate progresses, the Daily_Interview_Reminder_Schedule (Schedules) automatically reminds them of each upcoming interview round.
- Step 3: The record moves through the Application_Lifecycle_Blueprint (Blueprints) stages as HR screens, interviews, and evaluates the candidate, each transition logged with a comment.
- Step 4: When the candidate is marked Ready for Offer, the Job_Offer_Approval (Approvals) routes it to the hiring manager and HR head before the offer letter is generated.
- Step 5: Once approved, a workflow calls the Generate_Offer_Letter_Function (Functions) automatically to send the offer, and staff can also trigger it manually to resend it.
- Step 6: If HR manually adjusts a candidate's CTC figures in the report, the OnEdit_Recalculate_CTC_Workflow (Report Workflows) keeps the expected CTC accurate.
- Step 7: For candidates who are ultimately rejected, the Bulk_Rejection_Notification_Batch (Batch Workflows) sends a respectful rejection notice each night.
- Step 8: Once a referred, hired candidate completes probation, the Referral_Bonus_Payout_Workflow (Payments) automatically initiates the referral bonus payout to the referring employee.

8. Expected Learning Outcomes

- Understand the purpose and correct use case for each Workflow option in Zoho Creator.
- Learn the difference between event-driven automation (Form Workflows, Report Workflows) and time-driven automation (Schedules).
- Practice designing a controlled, auditable process using Blueprints alongside a human checkpoint using Approvals.
- Understand how Batch Workflows prevent performance issues when processing large data volumes.
- Learn how to write reusable logic once as a Function and invoke it from multiple different workflow types.
- Understand how Payments workflows can extend beyond fee collection to internal payouts such as employee referral bonuses.

9. Deliverable for This Lab Exercise

Students must build all eight automations on the existing Job_Application_Form/Report in Zoho Creator exactly as specified above, configure the listed governance rules, and submit a screenshot-based lab record showing: (a) each workflow's configuration screen in Zoho Creator's Workflow Builder, (b) the Blueprint's visual stage diagram with transition permissions, (c) a sample acknowledgement email and offer-approval flow triggered end-to-end, and (d) the Deluge script for the Generate_Offer_Letter_Function along with evidence of it being called from at least two different workflow types.

Output Screenshots - Workflows

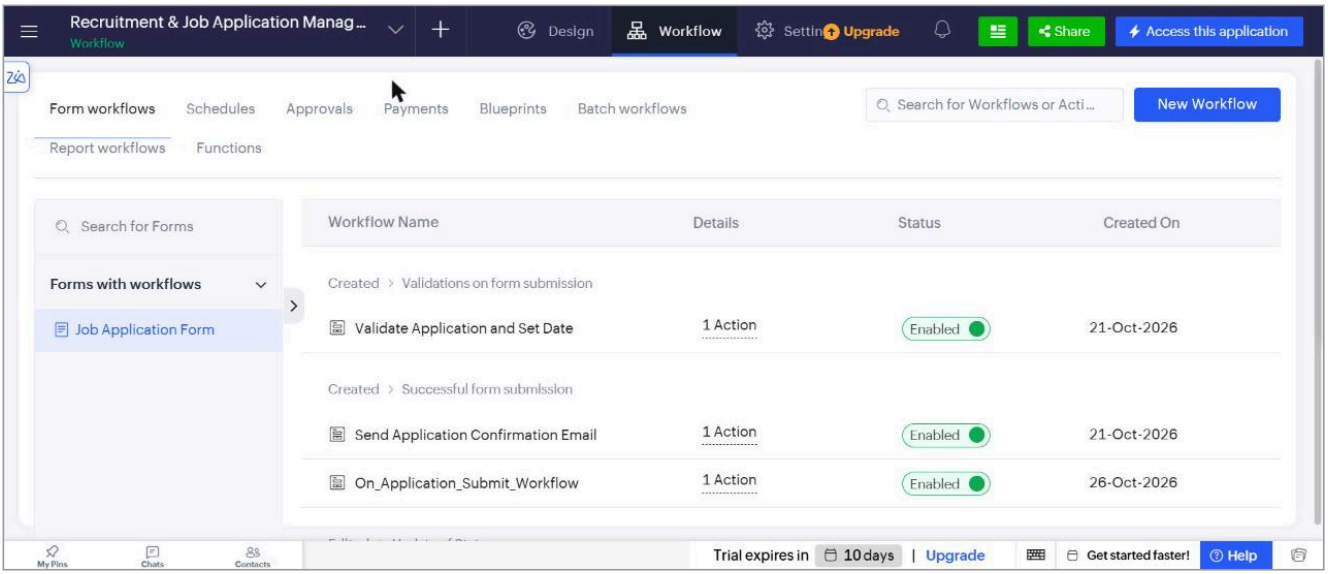

Fig 1: Form Workflows - On_Application_Submit_Workflow (Enabled)

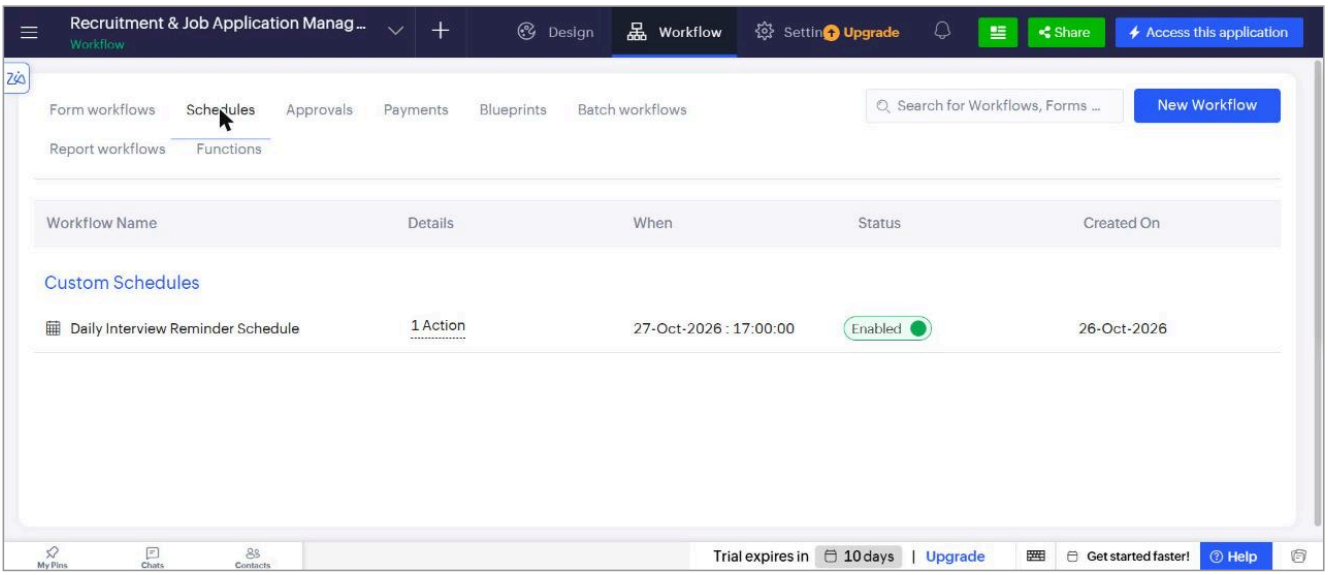

Fig 2: Schedules - Daily_Interview_Reminder_Schedule, daily at 5:00 PM

Output Screenshots - Workflows (contd.)

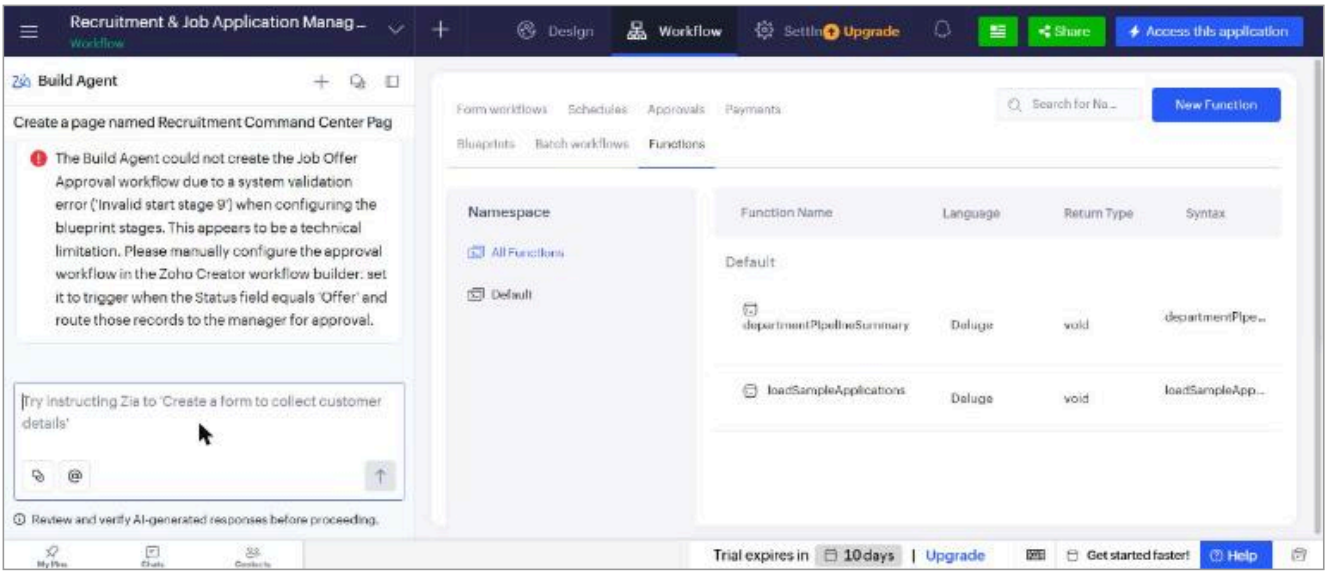

Fig 3: Approvals - Build Agent could not create Job_Offer_Approval ('Invalid start stage') - approvals list is empty

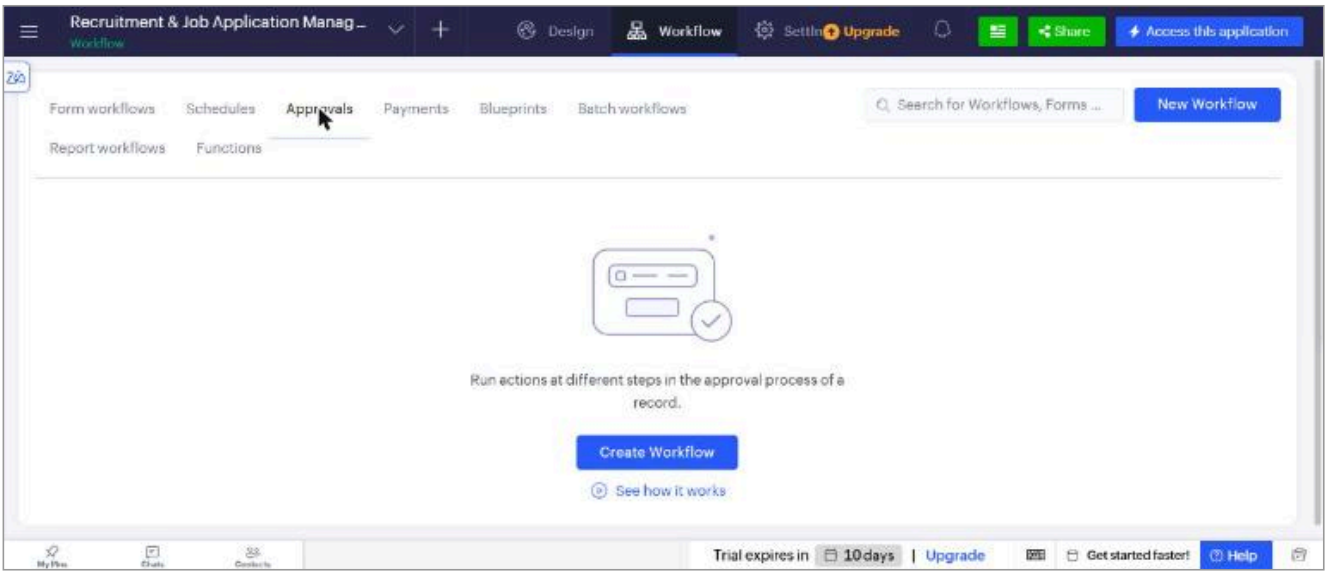

Fig 4: Approvals tab (no approval workflow could be created)

Output Screenshots - Workflows (contd.)

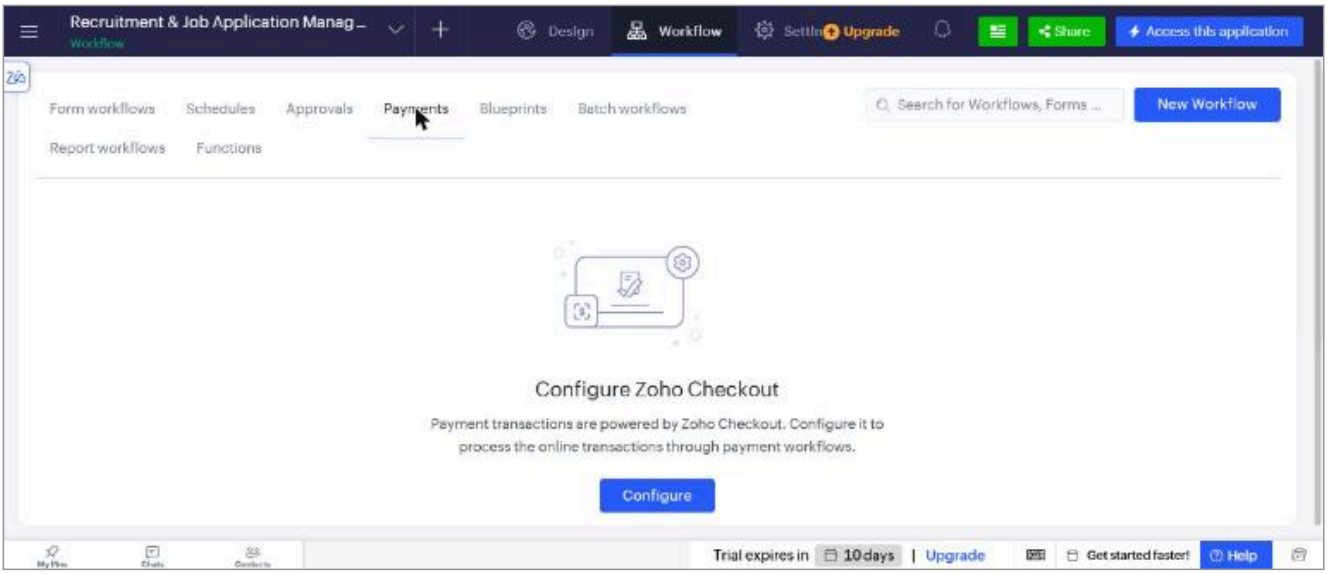

Fig 5: Payments tab - requires Zoho Checkout to be configured (not configured)

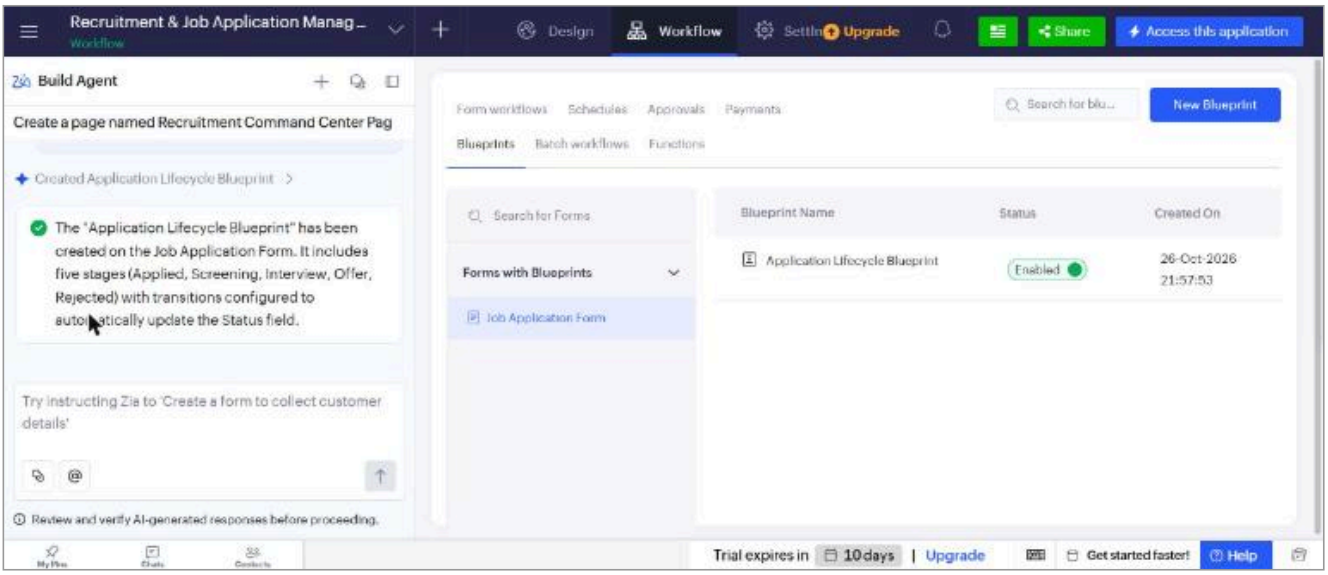

Fig 6: Blueprints - Application_Lifecycle_Blueprint created (Applied, Screening, Interview, Offer, Rejected)

Output Screenshots - Workflows (contd.)

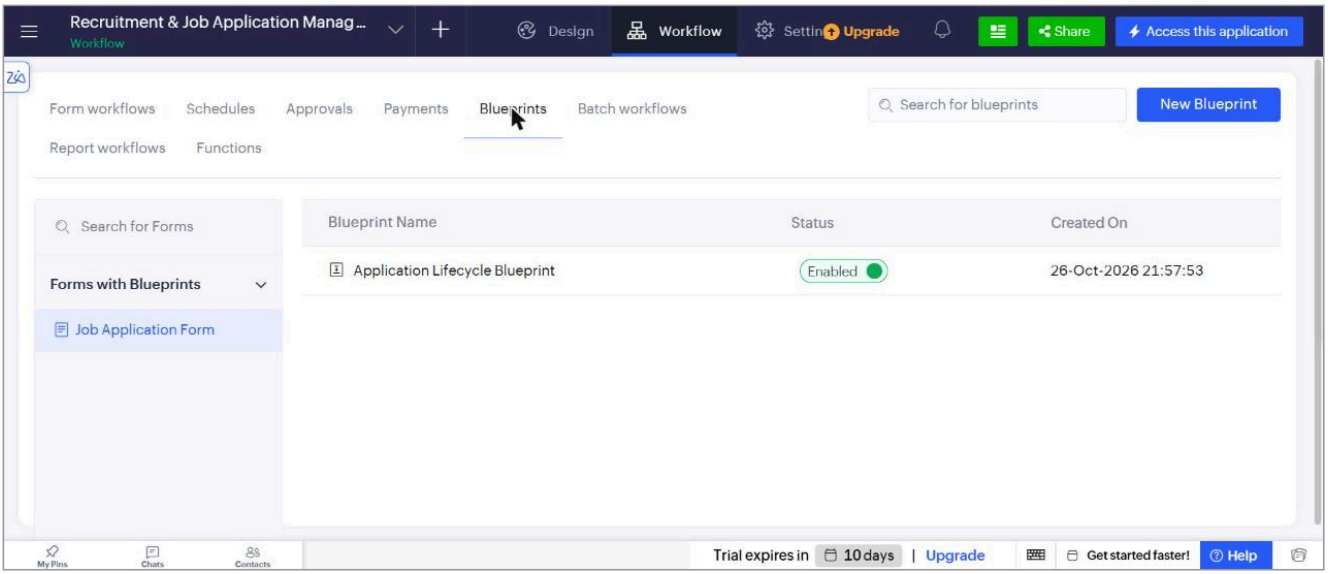

Fig 7: Blueprints list - Application_Lifecycle_Blueprint (Enabled)

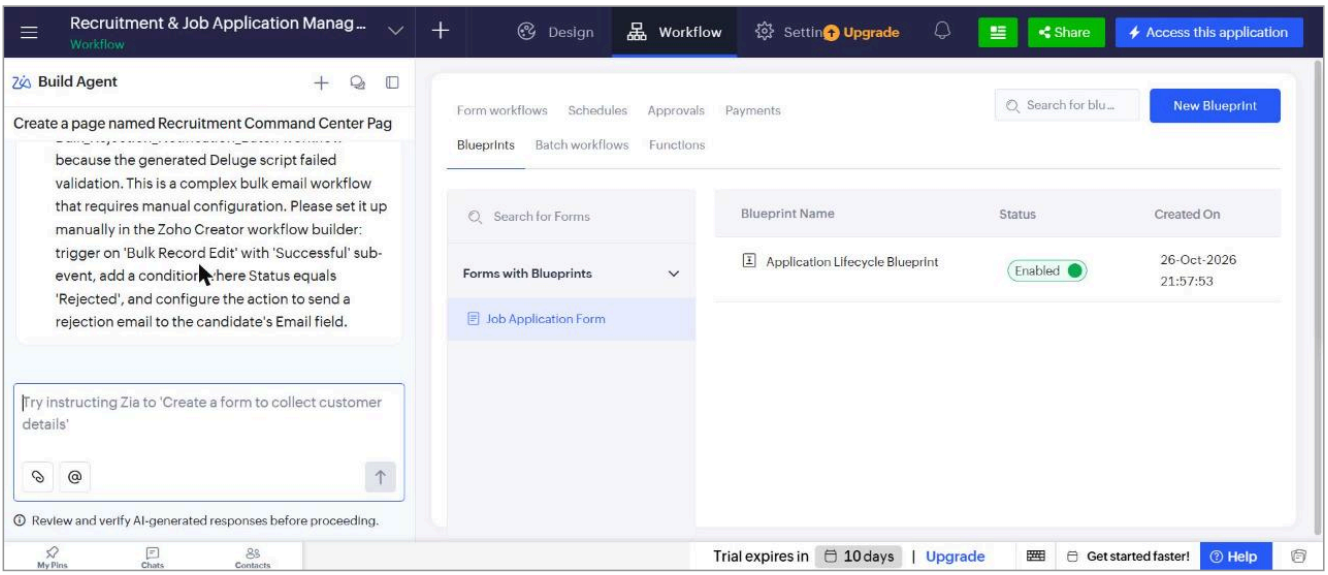

Fig 8: Batch Workflows - Build Agent could not create Bulk_Rejection_Notification_Batch (script validation failed)

Output Screenshots - Workflows (contd.)

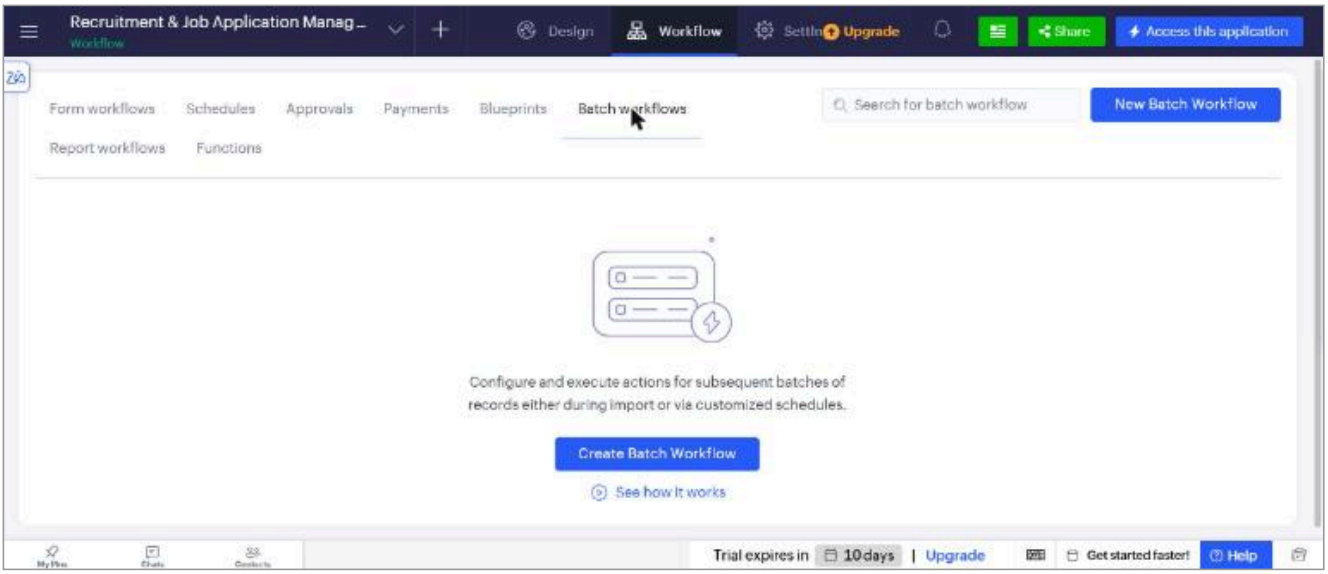

Fig 9: Batch workflows tab (empty)

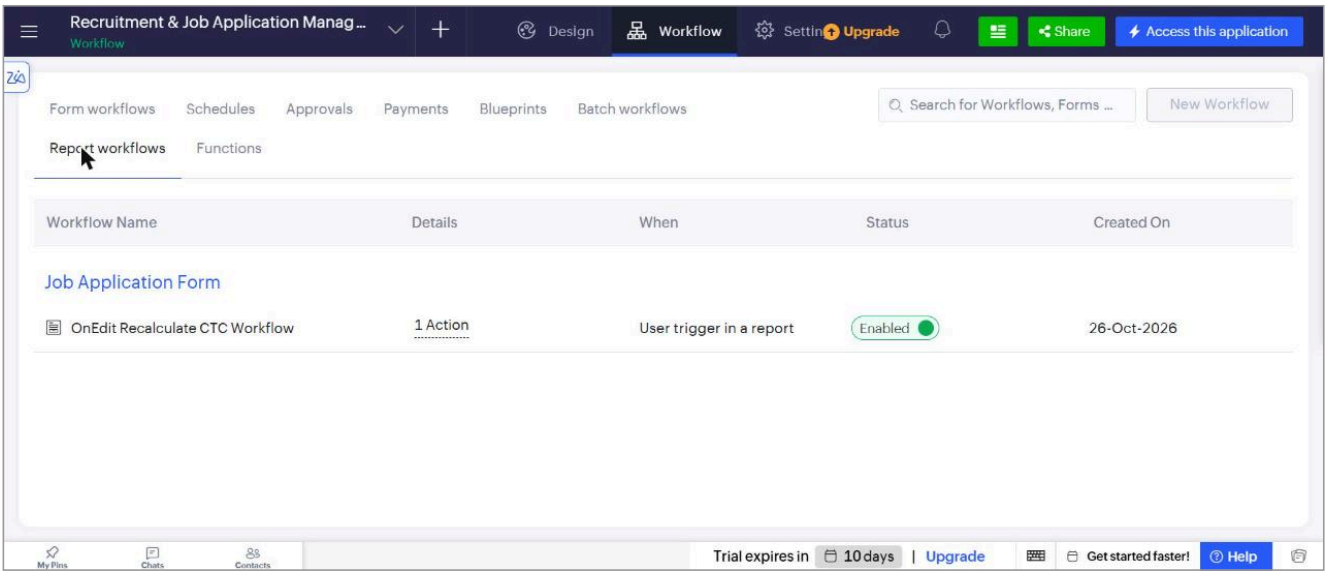

Fig 10: Report Workflows - OnEdit_Recalculate_CTC_Workflow (Enabled, user trigger in a report)

Output Screenshots - Workflows (contd.)

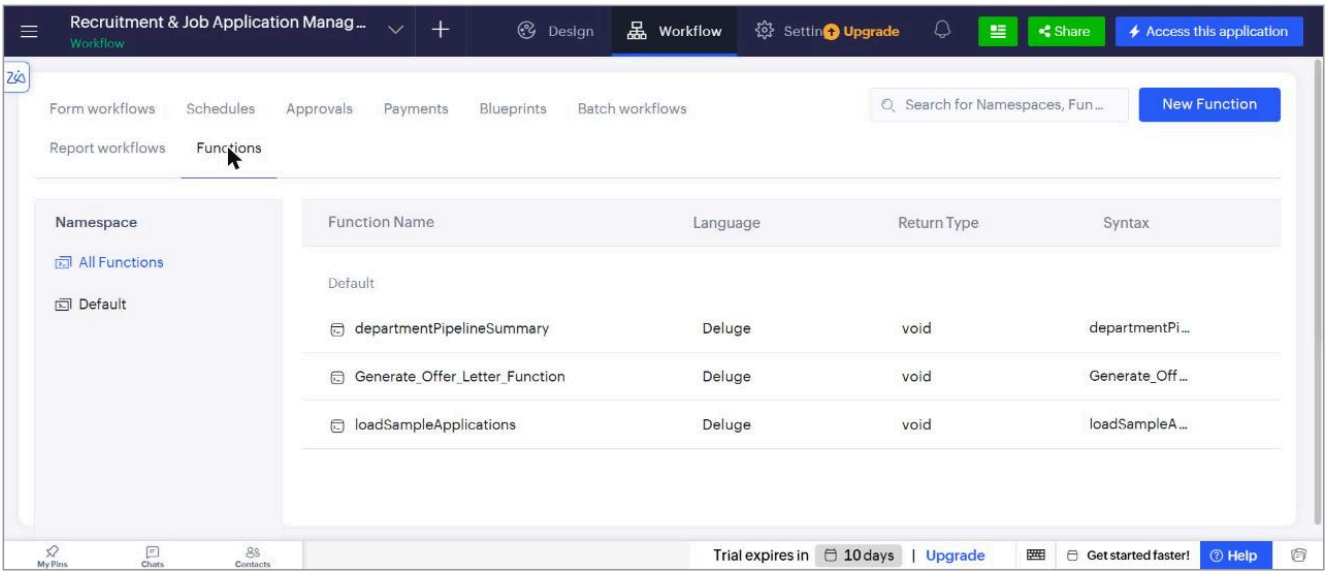

Fig 11: Functions - Generate_Offer_Letter_Function created (Deluge)
