Experiment - 4(a) : Data Modelling and Form Design

Aim:

To design and develop a Job Application Form in Zoho Creator by creating a structured data model, applying suitable validations and generating a report for managing candidate applications.

Theory:

Data modelling and form design involve organising data into suitable fields so that it can be collected and managed efficiently. Zoho Creator offers field types such as Name, Email, Phone, Address, Number, Date, Drop Down, Radio, Single Line and Auto Number.

In this experiment the **Job_Application_Form** collects candidate details, contact information, the department applied for, experience, employment type and the hiring pipeline fields used by HR. Mandatory fields and validations ensure that complete and correct data is stored, and the submitted applications are displayed in a report.

Data Model - Job_Application_Form:

Field	Field Type	Details / Validation
Application ID	Auto Number	Starts from 1001, generated by the system
Candidate Name	Name	First and last name, mandatory
Email	Email	Mandatory, email format checked
Phone	Phone	Mandatory, country code +91
Current Address	Address	Geo coordinates captured (used by Map View)
Department Applied For	Drop Down	Engineering, Data Science, Marketing, Sales, Human Resources, Finance - mandatory
Years Of Experience	Number	Mandatory, 0 to 40
Employment Type Preferred	Radio	Full-time, Part-time, Internship - mandatory
Application Submitted On	Date	Set automatically on submission
Status	Drop Down	Applied, Screening, Interview, Offer, Rejected (default Applied)
Screening Status	Drop Down	Pending, Shortlisted, Not Shortlisted
Interview Round	Drop Down	Not Scheduled, HR Round, Technical Round, Final Round
Interviewer Assigned	Single Line	Name of the interviewer
Scheduled Interview Date	Date	Required when Status is Interview

Procedure:

1. Open Zoho Creator and open the Recruitment & Job Application Management application.
2. Create the form **Job_Application_Form** from scratch.
3. Add the candidate, contact, job and pipeline fields listed in the data model.

4 Mark Candidate Name, Email, Phone, Department Applied For, Years Of Experience and Employment Type Preferred as mandatory.

5 Set the choices for the drop-down and radio fields and default values for Status, Screening Status and Interview Round.

6 Save and preview the form.

7 Enter sample candidate details and submit the form.

8 Open the report and verify the submitted records.

9 Filter the records by department and status.

Output:

Paste screenshot here (with browser address bar)
Form builder showing Candidate Name, Email, Phone, Current Address, Department Applied For ... fields

Fig. 4a.1: Job_Application_Form Design with Fields

Paste screenshot here (with browser address bar)
Field Properties panel of a field with 'Mandatory' ticked

Fig. 4a.2: Field Properties - Mandatory Validation

Paste screenshot here (with browser address bar)
Live form submitted with an empty mandatory field showing 'This field is mandatory'

Fig. 4a.3: Validation of Mandatory Fields

Paste screenshot here (with browser address bar)
Live Job Application Form filled with a candidate's details

Fig. 4a.4: Sample Candidate Details Entered

Result:

The Job Application Form was created in Zoho Creator with a structured data model, suitable field types and validations. The submitted applications were stored and displayed in a report for review and management.
