Experiment - 7 : Integrating Zoho Creator

Aim:

To integrate Zoho Creator with an external email service and automate the exchange of data for the Job Application System.

Theory:

Integration lets a Zoho Creator application communicate with external services. Actions can notify through email or SMS, push submitted data to another service or call an API with Deluge. In this experiment the application is integrated with email so that every candidate automatically receives a confirmation after applying, and a notification whenever HR changes the application status.

Procedure:

1. Open the application and go to the Workflow tab.
2. Create a workflow on **Created** → **Successful form submission** named Send Application Confirmation Email.
3. Click **Add New Action** and view the action types (Notification, Data access, Integrations, Deluge script).
4. Choose **Deluge script** and write a sendmail task with the candidate's Email field as recipient.
5. Set the subject to **Job Application Received - Department** and include Candidate Name, Application ID, Department, Employment Type, Submitted On and Status in the message.
6. Save and enable the workflow.
7. Submit a sample application with a valid email address.
8. Verify that the record is stored and check the inbox for the confirmation email.

Program:

```
// Send a confirmation email to the candidate after the application is submitted
cname = input.Name.first_name + " " + input.Name.last_name;
sendmail
[
    from :zoho.adminuserid
    to :input.Email
    subject :"Job Application Received - " + input.Department_Applied_For
    message :"Dear " + cname + ",<br><br>Thank you for applying. ... Application ID: "
        + input.Application_ID + "<br>Department Applied For: " +
input.Department_Applied_For
        + "<br>Application Status: " + input.Status + "<br><br>Regards,<br>HR
Recruitment Team"
]
```

Output:

Paste screenshot here (with browser address bar)
Workflow setup: Created > Successful form submission > Send Application Confirmation Email

Fig. 7.1: Creating the Email Workflow on Successful Submission

Paste screenshot here (with browser address bar)
'Add New Action' panel showing Notification, Data access, Integrations, Deluge script

Fig. 7.2: Action Types for Notification and Integration

Paste screenshot here (with browser address bar)
Deluge editor with the sendmail script

Fig. 7.3: Email Action with Candidate Email as Recipient

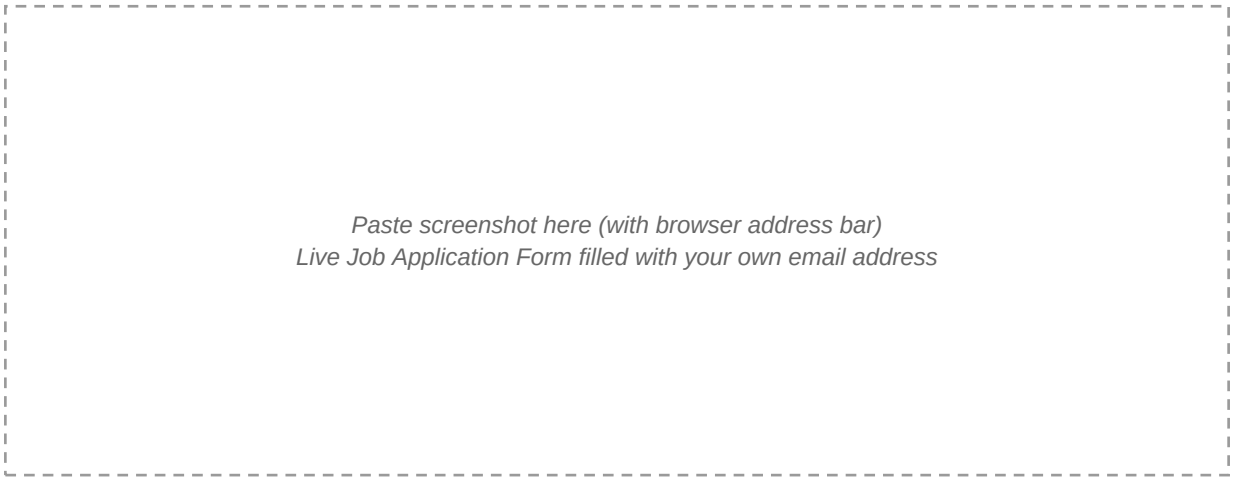

Fig. 7.4: Sample Application with a Valid Email Address

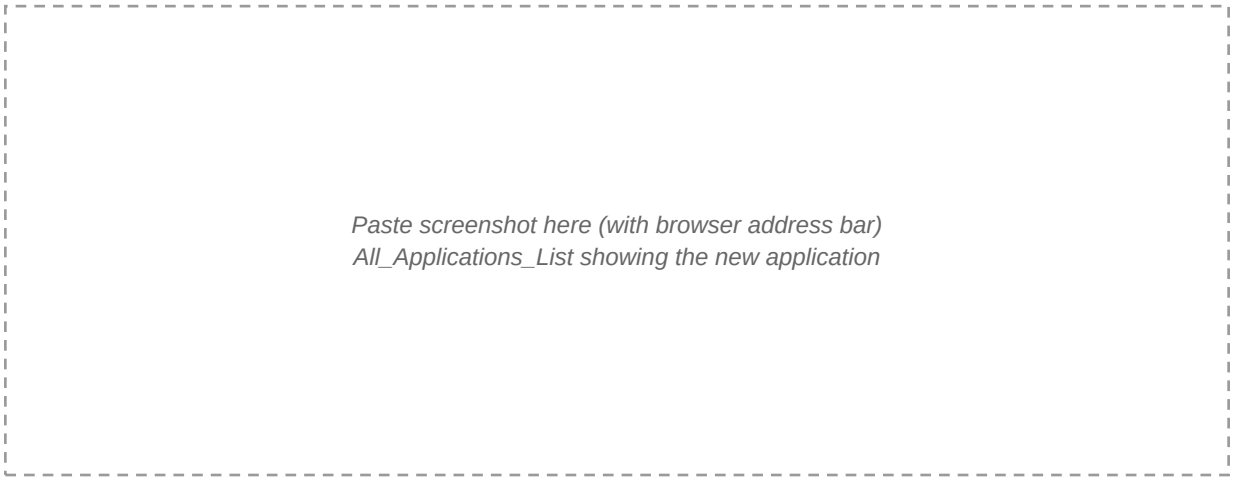

Fig. 7.5: Application Stored in Zoho Creator

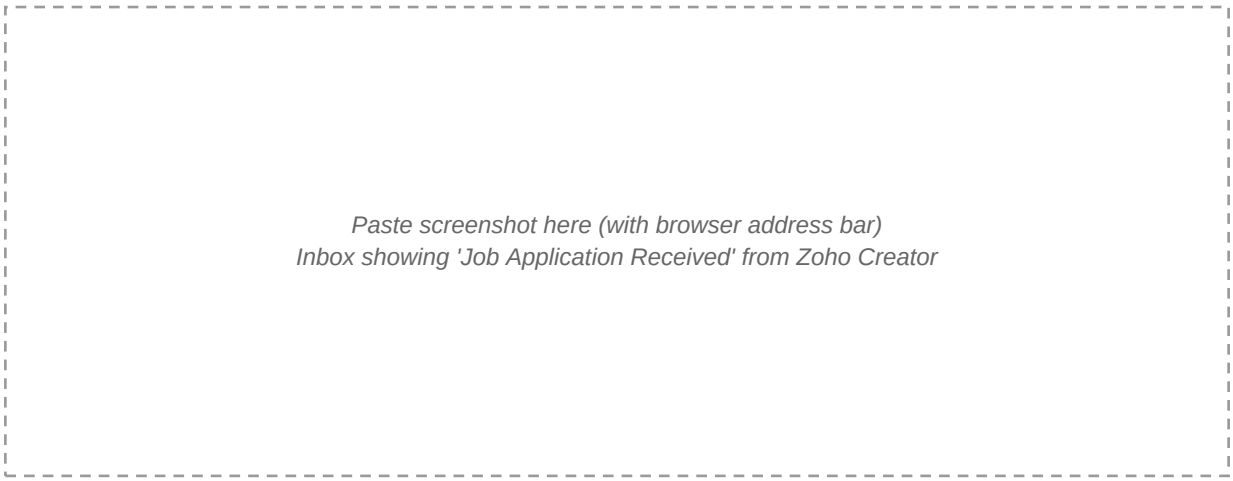

Fig. 7.6: Application Confirmation Email Received

Result:

The Job Application System was integrated with an email service. Each application was stored in Zoho Creator and an automated confirmation email was sent to the candidate, demonstrating the integration capability of Zoho Creator.
